Recombinant HPV-16 (Human Papilloma Virus 16); Clone HPV16/2058R (Concentrate)

Availability/Contents: <u>Item #</u> <u>Volume</u>

RA0671-C.1 0.1 ml RA0671-C.5 0.5 ml RA0671-C1 1 ml

Description:

Species: Rabbit

Immunogen: Non-T, non-B human acute lymphoblastic leukemia REH6 cell line

Clone: HPV16/2058R Isotype: IgG / Kappa Entrez Gene ID: Not Applicable Hu Chromosome Loc.: Not Applicable

Synonyms: Glypican-3, GTR2-2, Intestinal protein OCI-5, MXR7, DGSX; Glypican proteoglycan 3; GPC3;

GTR2-2; Heparan sulphate proteoglycan; Intestinal protein OCI-5; MXR7; OCI-5; SDYS;

Secreted glypican-3; SGBS1

Mol. Weight of Antigen: 33-35kDa

Format: 200ug/ml of antibody purified from Bioreactor Concentrate by Protein A/G. Prepared in 10mM

PBS with 0.05% BSA & 0.05% azide.

Specificity: Reacts with a protein of 57kDa, identified as the L1 protein of human papilloma virus type 16

(HPV-16).

Background: It is the major capsid protein of HPV-16. Infection with specific types of HPV has been

associated with an increased risk of developing cervical neoplasia. HPV types 6 and 11 have been associated with relatively benign diseases such as genital warts but types 16 and 18 are strongly associated with cervical, vaginal, and vulvar malignancies. The antibody reacts very strongly with formalin-fixed, paraffin-embedded tissues containing HPV-16 or -33; very weak reactions were occasionally observed with biopsy specimens or smears containing HPV-6 or

HPV-11. It cross-reacts with HPV37.

Species Reactivity: HPV-16

Positive Control: HPV-16 infected cells. Cervical tissue.

Cellular Localization: N/A

Titer/ Working Dilution: Immunohistochemistry (Frozen and Formalin-fixed): 1-2 µg/ml

Microbiological State: This product is not sterile.

Instructions For Use RA0671-C-IFU-RU

Revision: 1

P.O. Box 3286 - Logan, Utah 84323, U.S.A. - Tel. (800) 729-8350 - Tel. (435) 755-9848 - Fax (435) 755-0015 - www.scytek.com

Rev. Date: May 7, 2024

Uses/Limitations: Not to be taken internally.

For Research Use Only.

This product is intended for qualitative immunohistochemistry with normal and neoplastic formalin-fixed, paraffin-embedded

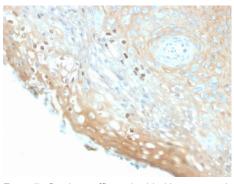

tissue sections, to be viewed by light

microscopy.

Do not use if reagent becomes cloudy. Do not use past expiration date.

Non-Sterile.

Formalin-fixed, paraffin-embedded human cervix stained with HPV16 Rabbit Recombinant Monoclonal Antibody (HPV16/2058R).

Procedure:

- Tissue Section Pretreatment (Highly Recommended): Staining of formalin fixed, paraffin embedded tissue 1. sections is significantly enhanced by pretreatment with Tris-EDTA HIER Solution (10x) pH 9.0 (ScyTek catalog# TES500) or Citrate Plus (10x) HIER Solution (ScyTek catalog# CPL500).
- 2. Primary Antibody Incubation Time: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user.
- Visualization: For maximum staining intensity we recommend the "UltraTek HRP Anti-Polyvalent Lab Pack" 3. (ScyTek catalog# UHP125, see IFU for instructions) combined with the "DAB Chromogen/Substrate Bulk Pack (High Contrast)" (ScyTek catalog# ACV500, see IFU for instructions).

Precautions:

Contains Sodium Azide as a preservative (0.09% w/v).

Do not pipette by mouth.

Avoid contact of reagents and specimens with skin and mucous membranes.

Avoid microbial contamination of reagents or increased nonspecific staining may occur.

This product contains no hazardous material at a reportable concentration according to U.S. 29 CFR 1910.1200, OSHA Hazardous Communication Standard and EC Directive 91/155/EC.

Warrantv:

No products or "Instructions For Use (IFU)" are to be construed as a recommendation for use in violation of any patents. We make no representations, warranties or assurances as to the accuracy or completeness of information provided on our IFU or website. Our warranty is limited to the actual price paid for the product. ScyTek Laboratories, Inc. is not liable for any property damage, personal injury, time or effort or economic loss caused by our products. Immunohistochemistry is a complex technique involving both histological and immunological detection methods. Tissue processing and handling prior to immunostaining can cause inconsistent results. Variations in fixation and embedding or the inherent nature of the tissue specimen may cause variations in results. Endogenous peroxidase activity or pseudoperoxidase activity in erythrocytes and endogenous biotin may cause non-specific staining depending on detection system used.
